Notes:

*Disc Publisher Units also contain removable CD/DVD/BDR media of variable size.

¹Memory will lose information when the device is powered off. Contains firmware code with no user data.

²Used for firmware code and contains no user data.

³Used for device settings and contains no user data.

⁴Contains data that could be stored by a user. However, in order to store this memory the user would need to have knowledge of device specific commands to store and access this memory (these commands are not available to the general public).

⁵Memory will lose information when the device is powered off.

⁶Used for firmware code, user print job data.
