How to setup and print single 2x6 photo strips in Breeze Webcam Photobooth

When you open Webcam Photobooth, first click Printer Setup:

Select the IP60 as your printer and select Setup Printer

Choose 6x2 as your paper in the paper size dropdown. You can also choose your quality and color matching settings in this dialog and click ok.
Verify your page settings on the Printer Setup page and then click ok. On the main screen click the Print Layout and you’ll see the template has adjusted for the 2x6 print. Here you can size and arrange photos how you want and design a template as you normally would. Once complete, click ok and you’re ready to start the booth to print 2x6 strips.
